PROFESSIONAL SUMMARY

Java Backend Developer with 1+ years of hands-on experience building and deploying production-grade REST APIs using Spring Boot, Spring Security, and Hibernate/JPA. Contributed to end-to-end delivery of a multi-client SaaS product (FDMS) serving funeral service industries. Proven track record of reducing manual overhead, improving client adoption, and mentoring junior developers. Comfortable with AWS deployments (Elastic Beanstalk, RDS, S3) and Agile team workflows.

EXPERIENCE

Smart Sight Innovations — Mumbai, India

Java Backend Developer | April 2025 – Present

Project: FDMS (Funeral Director Management System) | *Spring MVC · Spring Security · MySQL · AWS S3*

- Designed and shipped an e-signature module now used by ~80% of all client accounts, eliminating the need for wet signatures and cutting document turnaround by an estimated 2–3 days per case.
- Built an editable reports feature adopted by 50% of clients, reducing manual re-keying and cutting paperwork effort by ~40% for those accounts.
- Collaborated directly with international clients (US-based) in requirements gathering meetings, translating business rules into API contracts and database schema changes.

EcoKranti CRM — Business Management System | *Spring Boot · Spring Security · PostgreSQL · AWS S3*

- Designed and built the backend for a full-featured CRM covering the complete business lifecycle - from lead capture and multi-stage sales pipeline through quotation creation, sales order conversion, invoice generation, and last-mile delivery tracking.
- Implemented a granular role-based access control system with Spring Security, enforcing hierarchical data visibility where each role can only access leads, pipelines, and team data within their scope.
- Designed PostgreSQL schemas with automated pipeline stage transitions and inventory lifecycle management — locking stock on order confirmation and auto-deducting on delivery completion.

Project: Time Tracker (Internal Tool) | *Spring Boot · Spring Security · MySQL · AWS S3*

- Architected and built REST APIs from scratch to replace Redmine for daily/weekly time logging across ~70 employees, cutting reporting overhead and giving management a single source of truth.
- Implemented JWT-based authentication and role-based authorization (Admin / Developer / Manager / HR), securing access to sensitive reporting data.

TECHNICAL SKILLS

Core: Java, Spring Boot, Spring MVC, Spring Security, Hibernate / JPA, REST API design, Microservices fundamentals

Databases: MySQL, PostgreSQL — schema design, query optimization, indexing

Cloud & DevOps: AWS (Elastic Beanstalk, RDS, S3)

Frontend basics: Thymeleaf, JSP, JavaScript, jQuery, AJAX

Tools: IntelliJ IDEA, Postman, GitHub, Bitbucket, Jira, Maven

EDUCATION

Bachelor of Science — Information Technology

Mumbai University | 2021 – 2024
